

Huddle Odontogram Update

May 2025

What?

We're making an update to the odontogram behavior in Huddle (and the viewer), related to how AI recommendations and PMS treatments are displayed.

Why?

To help clarify and simplify the experience for users, we are updating the information display when an AI recommendation *has been addressed* by a scheduled or completed treatment.

This ensures that **purple** = **actionable**.

When?

Update coming May 28-30, 2025.

What will this look like?

When a recommendation is made...

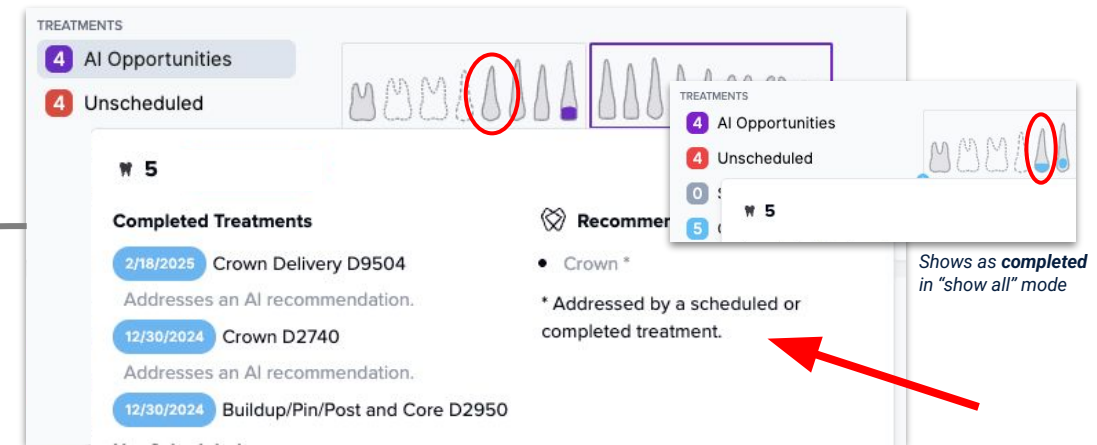

If a relevant treatment is **unplanned or unscheduled**:

- The tooth will appear as **purple** (unplanned) or red (unscheduled)
- No change from today

If a relevant treatment **has been completed**:

- The tooth will not appear as purple
- The hover and printout will show the recommendation as “addressed”

If a relevant treatment **has been scheduled**:

- Mostly similar to completed treatments (no purple)
- But in cases where the recommendation is *more extensive* than what's scheduled - the **purple** will help prompt a second look to double-check
